

## Leisure

McVeigh Insulations were selected to supply and install the insulated enclosure to accommodate the 'Real Snow' indoor ski facility named Xscape, Central Milton Keynes. The enclosure 175m long, 60m wide was constructed using 200mm thick mineral fibre core composite panels to the walls and lid. Specialist design curtain walling was incorporated into the construction providing a viewing gallery from the adjacent Health club.

The floor insulation was provided using an expanded Polystyrene core composite panel laid onto a vapour control membrane. Rope access techniques were adopted for the application of vapour seals which are paramount to the success of the installation due to the extreme climatic conditions.

Since the completion of Xscape, Central Milton Keynes, McVeigh Insulations have been awarded a repeat contract for a similar development at Castleford, West Yorkshire.

## Retail

McVeigh Insulations were awarded the contract to supply and install the composite cladding panels forming the external envelope at TESCO Pengam Green, Cardiff. All the cladding interface details were developed to ensure air leakage is kept below the stringent TESCO specification of  $3\text{m}^3/\text{hr}/\text{m}^2$ . Internal fire walls to the store were also installed using Rockwool Core composite panels.

The external cladding panels, horizontally laid, were fixed directly back to the steel columns without the need for secondary cladding rails. The 125mm thick panels typically span 6000mm, provide a 1 hr fire rating to a boundary condition and comply with current thermal requirements of the building regulations.

Following the successful completion of the Cardiff store McVeigh Insulations have been selected as a TESCO **Partnering Contractor** and subsequently completed over 100 new stores and extensions nationwide.

## Food Industry

Greggs the Bakers contacted McVeigh Insulations to install the insulated hygienic cladding to construct a 'state of the art' savory production facility at Balliol Business Park, Newcastle.

The works package included stainless steel kerbs, insulated external cladding, internal partitions, walk-on ceilings, hygienic doorsets, fire walls and low temperature enclosures.

From enquiry to completion McVeigh are able to provide competitive quotes, detailed working drawings, project specific Health & Safety documentation, experienced Contract management and skilled installation teams who operate with flexibility to meet our customer needs.
